Fabriq Books

Put your books on self-drive.

AI-native finance operations on top of the accounting system you already use.

Your ERP can answer questions. It can’t do the work.

Bank reconciliation

Matching hundreds of bank lines to invoices and payments. One by one. Every month. Every account.

Cash application

A payment arrives. Someone manually hunts down which open invoices it covers, then applies it.

Collections follow-up

Working through an aging report, deciding who to chase, drafting follow-ups, tracking responses.

The gap isn’t information. It’s execution.

SMB finance teams know exactly what needs to be done — they just have to do all of it themselves.

7 million North American SMBs run on QuickBooks, Xero, or Zoho. None of them are switching.

Target Market:

- **Mid-market:** ~300K businesses, 50–500 staff
  - QuickBooks Enterprise, Sage 50
- **SMB core:** ~2M+ businesses, 5–50 staff
  - QuickBooks Online, Xero, Zoho Books

2.3M addressable businesses — already on a modern ERP, not switching

North America accounting software market: $6.8B today → $11B+ by 2030

Fabriq Books does the legwork. Your team makes the calls.

Today

1. Controller opens aging report → exported from QBO into spreadsheet
2. Manually cross-references bank lines → one by one, tab by tab
3. Enters matches back into QBO → risk of errors on re-entry
4. Repeats next month → same work, every cycle

3–5 hours/month per account

With Fabriq Books

1. "Clear October bank account" → controller states the goal
2. Fabriq Books does the analysis → finds matches across all sources
3. Proposes matches for sign-off → approve, reject, or edit each one
4. Applies confirmed matches → nothing touches the books without approval

Review takes minutes, not hours

Your ERP stays. QuickBooks · Xero · Zoho Books

Three things converged.

1. AI can now execute finance workflows — not just answer questions

The most well-funded teams in fintech are rebuilding finance infrastructure for this. Their approach requires replacing your ERP. Ours doesn’t.

2. ERP APIs matured

QuickBooks, Xero, and Zoho all have robust APIs. Multi-ERP sync is a solved engineering problem. Building on top of existing systems is now a product challenge, not an infrastructure one.

3. SMB finance teams are actively looking

Bookkeepers and controllers aren’t asking "should we automate?" They’re asking "what works for our size, without blowing up what we already have?"

One agent. Three workflows. Your ERP stays.

Connect → Sync QuickBooks, Xero, or Zoho + import bank statements

State a goal → Clear unmatched transactions / Work through overdue accounts

Agent works → Pulls data, finds matches, proposes actions

Human reviews → Approve, reject, or edit — batch or one by one

Executes → Confirmed actions applied. Books updated.

The three workflows

- Bank reconciliation
- Cash application
- Collections follow-up

Every tool can answer a question. Only Fabriq Books can execute one.

Feature	Fabriq Books	QB / Xero / Zoho	Point tools	Enterprise
Sits on top of existing ERP	✓	—	Partial	Partial
Multi-ERP (QB + Xero + Zoho)	✓	—	—	✓
Answers finance questions	✓	✓	✓	✓
Executes multi-step finance tasks	✓	—	—	Partial
Proposes actions for approval before execution	✓	—	—	—
Partner-ready (multi-client)	✓	—	—	—

Partner-led distribution. SaaS economics.

The channel

Accounting firms and bookkeepers are already doing reconciliation and AR for dozens of SMB clients every month — manually. Fabriq Books lets them do it in a fraction of the time. One firm = multiple client orgs. We become part of their workflow.

The economics

- **Revenue model:** Monthly SaaS per org + partner tier for multi-client firms
- **Retention driver:** Reconciliation and AR happen every month, on deadline. Once embedded, we're infrastructure.
- **Distribution leverage:** One accounting firm can bring 20–50 client orgs. No direct sales team needed to scale.

Technical founders. Working product. Honest about what’s next.

[Founder Name] — Technical Co-Founder [Bio placeholder]

Seeking: GTM co-founder or advisor with accounting firm relationships

What we know we don’t have yet:

We’re engineers who built a platform. We haven’t yet had the external conversations — with accounting firms, SMB finance teams, potential partners — that will tell us whether this is the right product. Finding that out is the explicit next milestone.

We’re not looking for capital. We’re looking for the gap capital can’t fill.

GTM for partner-led distribution

How do you get the first 5 accounting firms to pilot a new tool with their clients? What does that conversation look like?

PMF process

How do we run discovery with SMB finance teams in a way that generates real signal — not just validation of what we already believe?

Network

Introductions to accounting firms or bookkeepers in the Hamilton-Toronto corridor willing to be early pilot partners.

We show up with a working product, clear hypotheses, and a willingness to be wrong.
