EDUCATION

UNIVERSITY OF SOUTHERN CALIFORNIA
MS in VLSI Design
Los Angeles, USA

PSG COLLEGE OF TECHNOLOGY
BE in Electrical Engg
Coimbatore, IN

PATENTS

A System and method of defining a hierarchical datamodel and related computation and instruction rules using spreadsheet like user interface
US 8055995 | Issued Nov 8, 2011

RECENT LEARNING

CERTIFICATIONS
Snowflake | 2023
AWS Data Analytics Specialty | 2022
Google Cloud Professional Architect | 2019

COURSES
Blockchain Specialisation | 2019
Deep Learning by Andrew NG | 2017
Machine Learning by Andrew NG | 2016

SKILLS

PRESENT
Python • Typescript • Java
Langchain • Next.js • Flask • Spring
Postgres • Datastore • MySQL
Spark • Redshift • Presto

EXPERIENCE

FABRIQ LABS | Independent Consultant
Jan 2022 - Present | Toronto, CA
Provide consulting services in revenue intelligence for companies using products like Salesforce CPQ, Netsuite, Zuora and other SaaS tools. Some of the clients I have worked with in the last 2 years are Optimizely, Unanet, Qlik and Airgas.
Built a prototype data product to centralize revenue data and automate use cases

CRAYON DATA | Consultant + NEOM Tonomous
July 2021 – Dec 2021 | Chennai, Dubai
Consulted on building a data product critical to the infrastructure of the futuristic city NEOM.

CRAYON DATA | VP + Head of Engineering
Nov 2017 – Mar 2021 | Chennai, IN
Led a large team of high-caliber engineers building the flagship data product, maya.ai.

- Moved the workloads to serverless and containerised tool chain to improve OPEX and portability for customers.
- Made the product compatible with major cloud providers and data platform vendors including Databricks.
- Led Solution Architecture for most of the deployments at marquee clients including Emirates, American Express, HDFC and Citi.

AIRLOYAL | Co Founder & Head of Engineering
Jan 2013 – Dec 2016 | Chennai, IN
Co-founded the company and built the engineering team from the ground up. The core offering was an android app that featured an offer wall where users would complete tasks and earn airtime. Led engineering and product functions to build the following solutions:

- In 2015, the app had over 13 million users with a 4.4 rating on the Google Play Store. The platform handled around 1.5 million micro-transactions per month, comparable to leading recharge apps like FreeCharge.
- Built a back-end to recharge pan-India mobile numbers through primary and secondary recharge providers.
- Created a personalization engine using early stage machine learning models, which can optimize the task rewards based on the profile and activity of the user.
- Built a modern survey app where users can submit responses in exchange for airtime. The survey app was used by companies like L'Oreal, Google, and Millward Brown.

ORANGESCAPE (KISSFLOW) | Director of Engineering
Jan 2004 – Dec 2012 | Chennai, IN
Was employee No. 1 and rose through the ranks. As a founding team member, took on multiple responsibilities beyond my core software engineering role, including business development, professional services with clients, and collaborating with major partners such as Wipro.

- Developed a no-code platform for building business applications, which included extensive meta-programming and a custom business rules engine.
- Early adopter of cloud technologies; collaborated with Google to leverage App Engine during its beta phase, prior to public launch.
- Traveled to the UK on a Sole Representative visa to secure and nurture the first overseas customer, United Biscuits—a FTSE-listed company—prior to the formal launch of Kissflow at Google I/O 2012.
